The eight disciplines (8D) model is a problem solving approach typically employed by quality engineers or other professionals and commonly used by the automotive industry. Its purpose is to identify, correct, and eliminate recurring problems, and it is useful in product and process improvement. Introduction to Eight Disciplines of Problem Solving (8D) The Eight Disciplines of Problem Solving (8D) is a problem solving methodology designed to find the root cause of a problem, devise a short-term fix and implement a long-term solution to prevent recurring problems.

the 8D Problem Solving Process the cause(s) of the problem is not known. Possible Cause – Any cause, identified through Process Mapping and C & E Matrix, Why-Why Diagram or Fishbone Diagram, that describes how an effect. Defining the root causes of a problem is the core of the 8D problem-solving process. This is normally the toughest aspect of the problem-solving process; if the root causes of the problem were obvious, then the problem would have been solved already. There are usually two families of causes at.
